

Internship Task-5

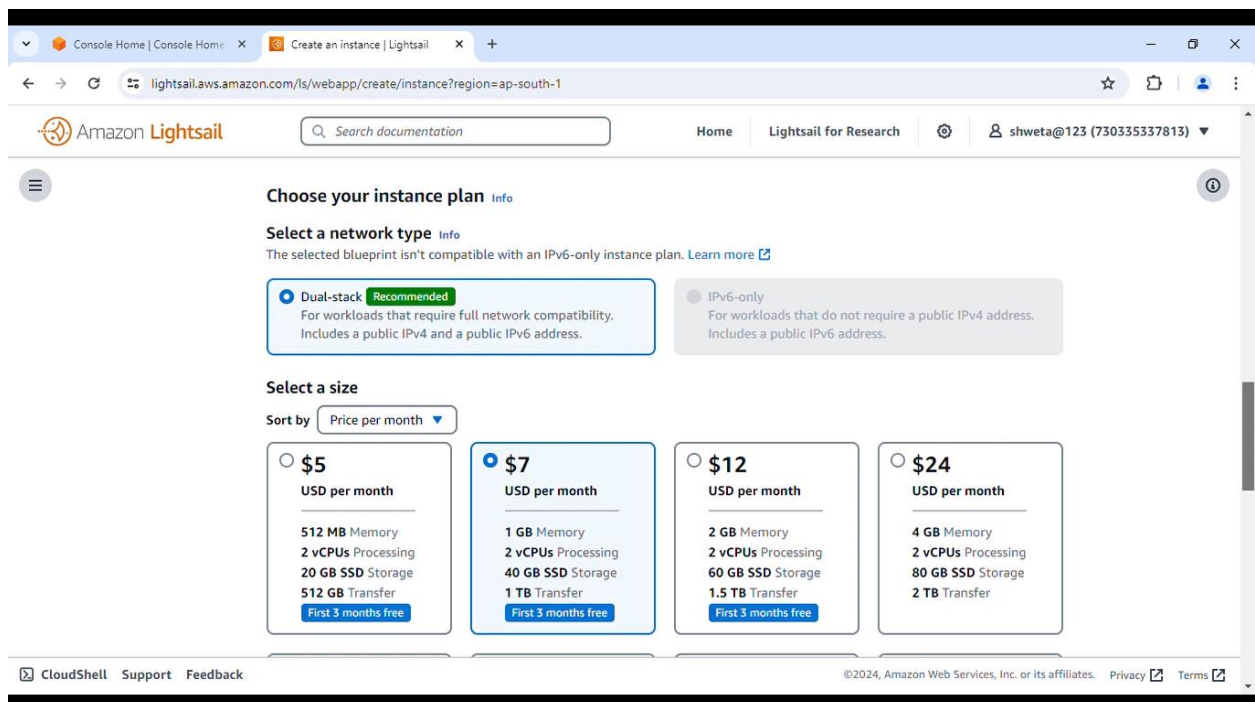

Cloud Powered Blog Platform

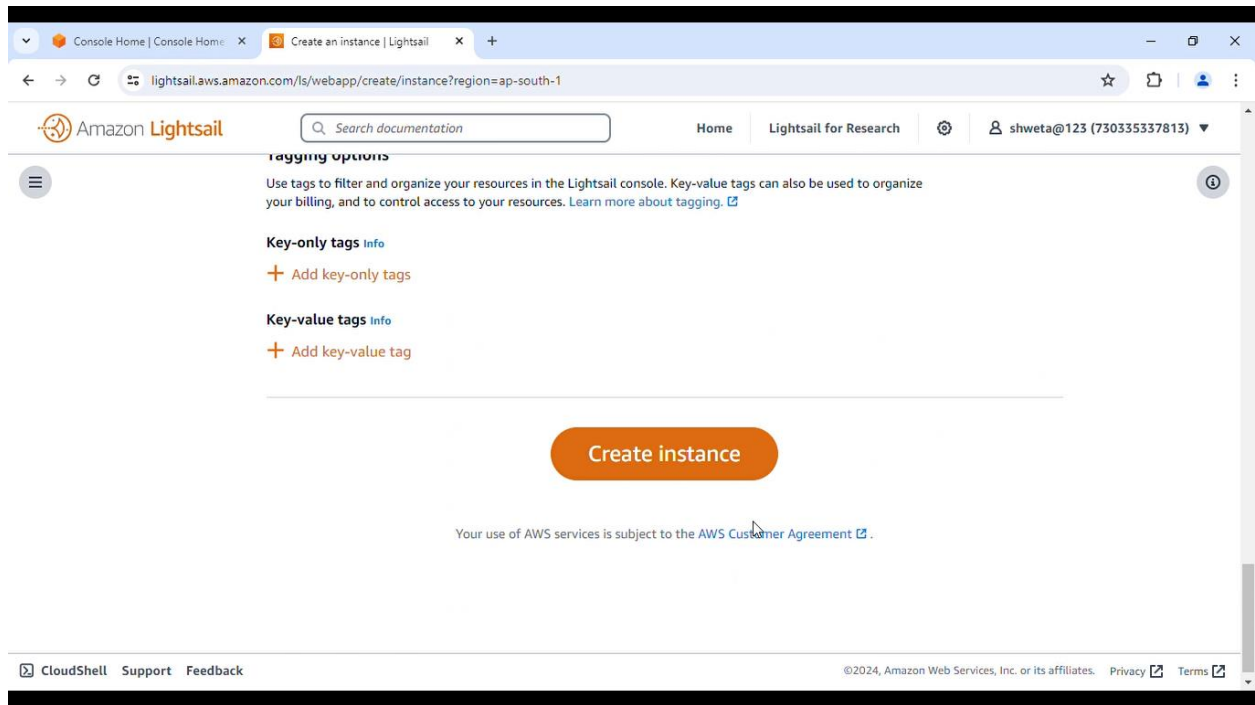

- ❖ Using AWS lightsail service we will login to a wordpress to build a Cloud powered blog. To login to a wordpress select a platform as linux and wordpress and select a default keypair.

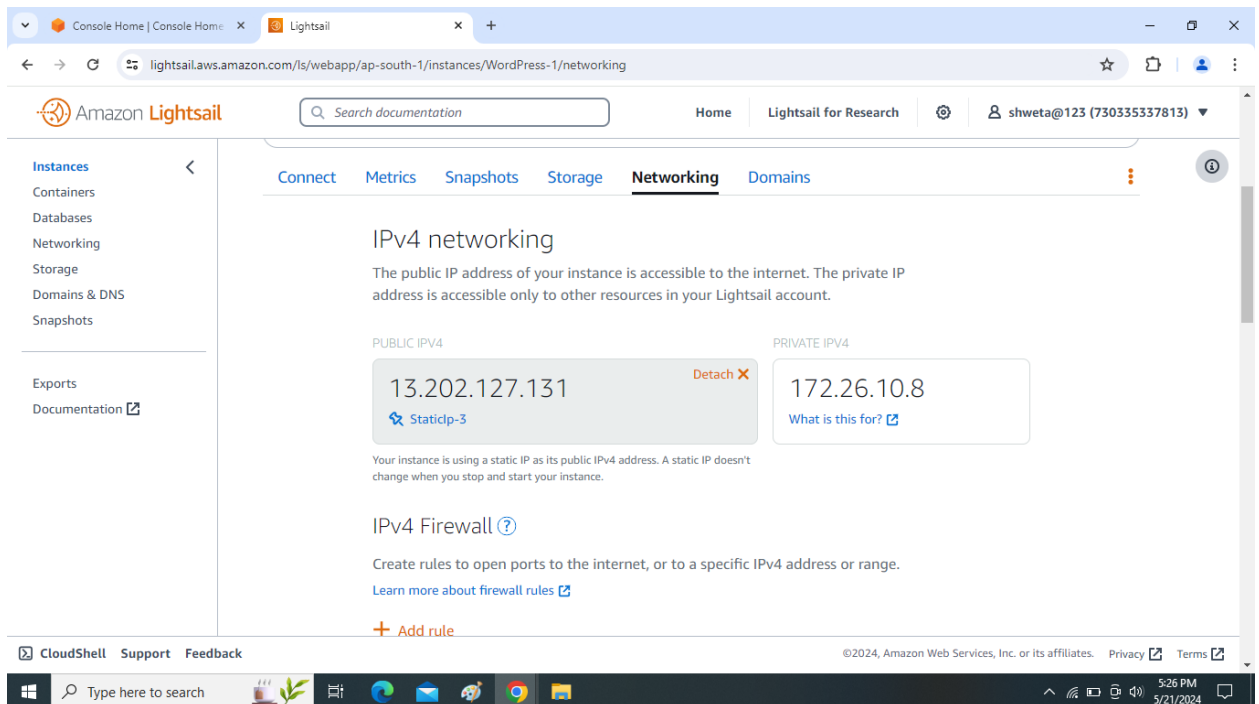

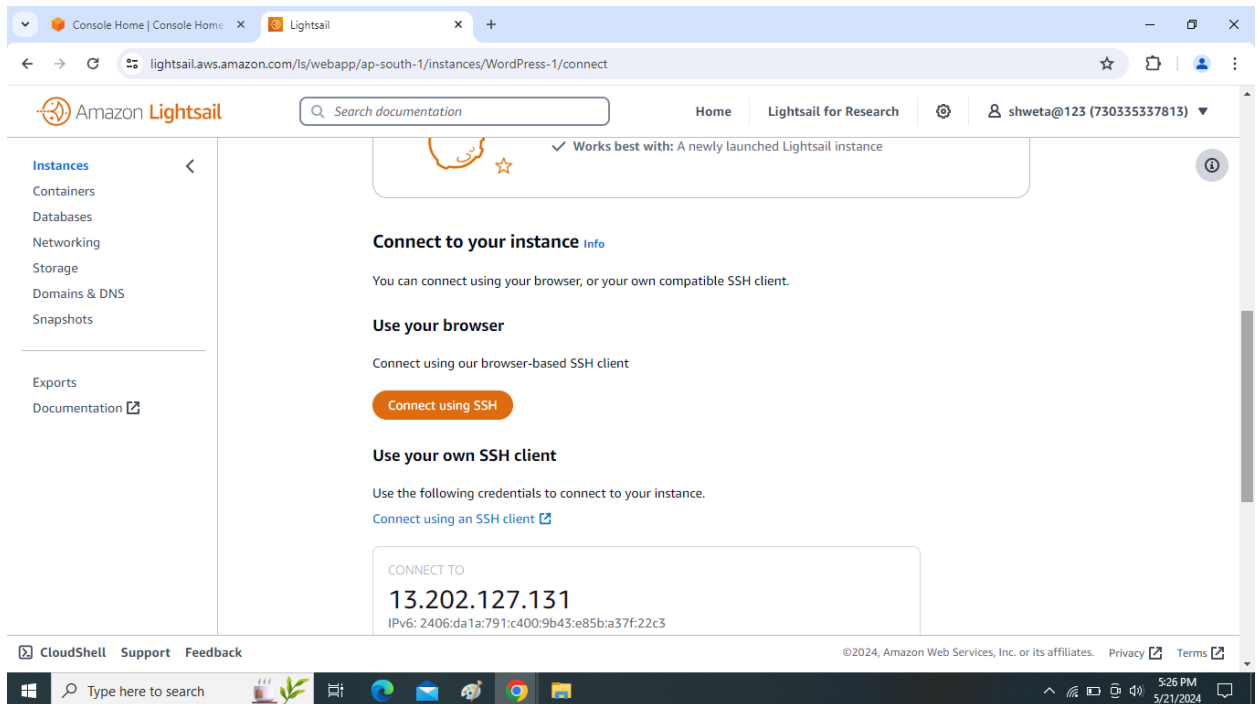

❖ Select a size of \$7 and then create an instance.

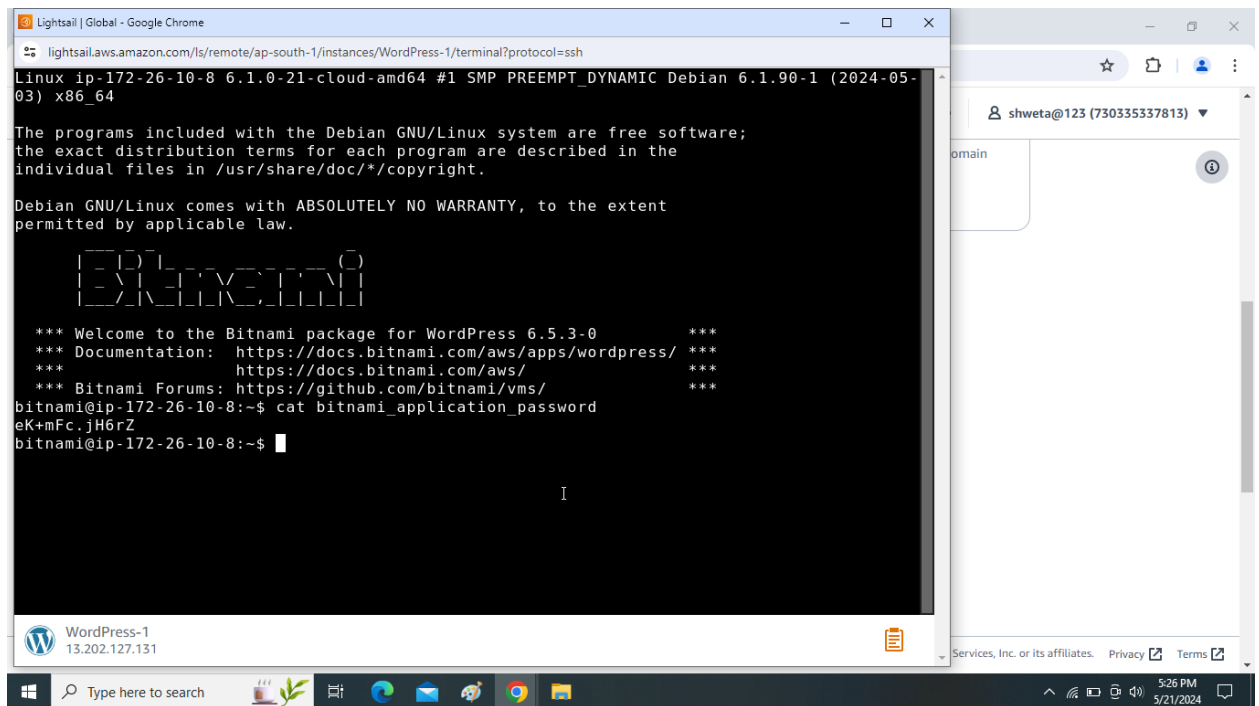

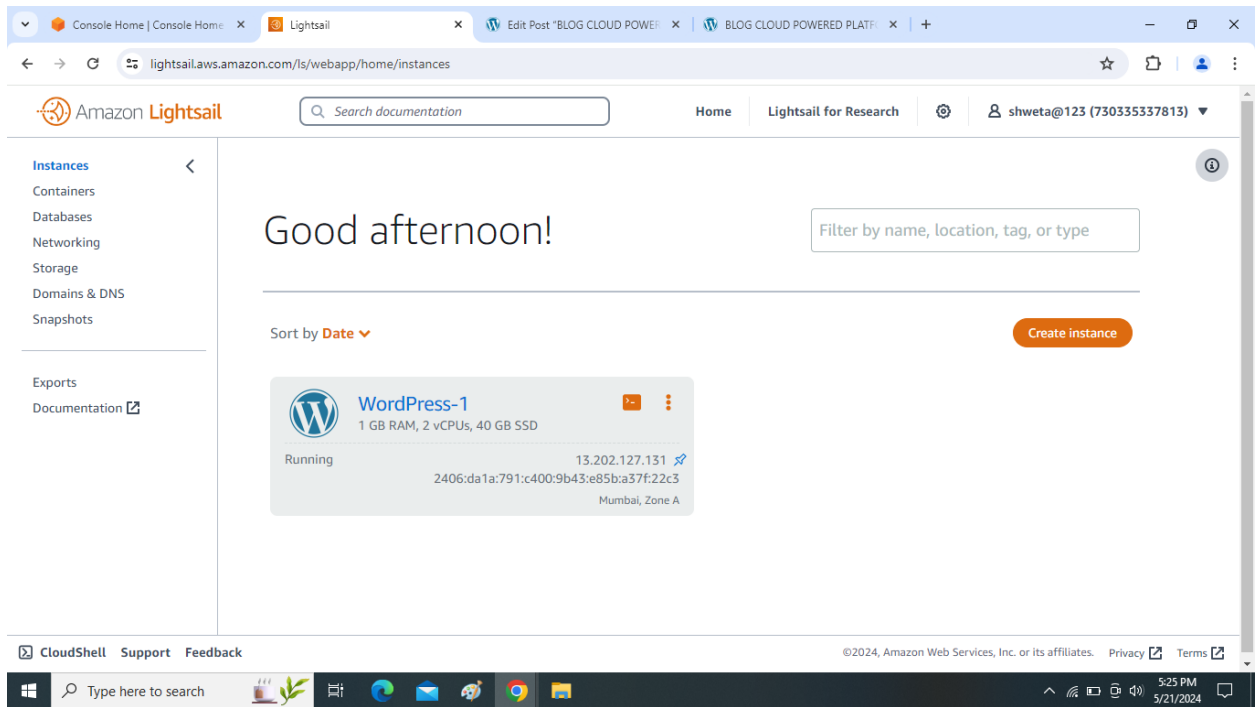

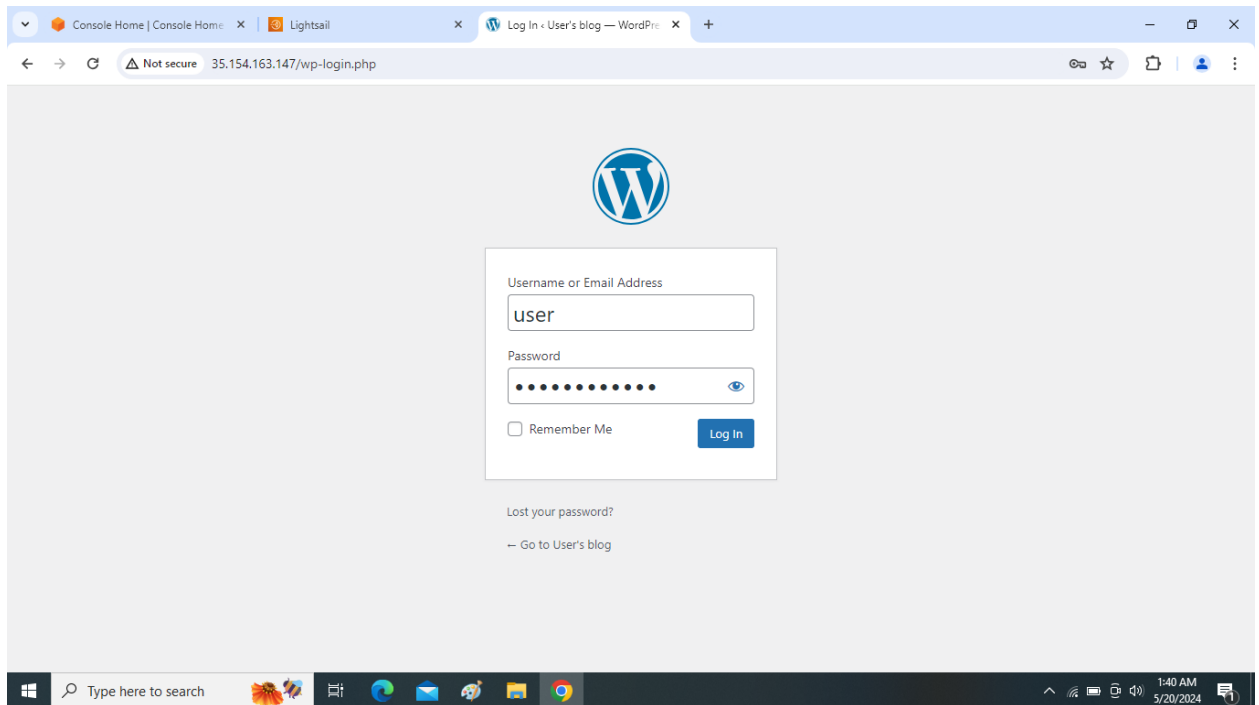

❖ Select a static ip and attach to the instance and then connect through SSH.

❖ Then a CLI page appears in which we get a password with a command “cat bitnami_application_password”.then copy the ip address and open in a new tab the a login page appears for a wordpress

❖ Upload the file and copy the URL of that blog and open it in a new tab we can see the written blog.
